Individual Income Tax Returns, Preliminary Data, 1985

By David Barker and June Walters*

More than 100 million individual income returns were filed for Tax Year 1985. Adjusted gross income (AGI) reported on these returns increased by 8.5 percent from 1984 to 1985. Increases in all major sources of income contributed to this growth. The tax base, as measured by "taxable income," did not increase quite as fast as AGI due to rising deductions and an increase in the exemption amount mandated by the Economic Recovery Tax Act (ERTA) of 1981.

The preliminary 1985 data are presented in Table 1 and data for earlier years are summarized in the Selected Statistical Series, shown near the end of this report.

SELECTED SOURCES OF INCOME

The increase in AGI for 1985 was due primarily to a 7.2 percent increase in salaries and wages. There were also substantial increases in all of the other major sources of income except for interest received where growth was very modest (see Figure A).

While interest rates declined from 1984 to 1985, the aggregate amount of interest reported

rose a slight 2.5 percent. This was a considerable drop from the 14.7 percentage increase between 1983 and 1984 when interest rates were high [1]. In fact, the average amount of interest reported per return fell from 1984 to 1985. Interest was the only major component of income where the average amount reported per return for 1985 was less than that for 1984 [2].

Net gains from the sale of capital assets, increased 22.3 percent, the largest increase among the various sources of income. Among the many types of transactions resulting in capital gains (or losses) historically the largest share has been for sales of corporate stock [3]. Thus the large increase in taxable capital gains in Tax Year 1985, may be associated with activity in the stock market. Between 1984 and 1985, the Standard and Poor's Index of 500 Stocks increased about 30 percent (mid-year to mid-year).

Dividends in AGI increased by a robust 14 percent after a 2-year period of stagnation. Pension income also grew substantially in 1985, increasing by 18.9 percent over its 1984 level. Amounts of taxable pensions reported were more than double those reported just 4 years earlier.

Figure A.-- Selected 1985 Sources of Income and Percentage Change from 1984

Selected income source	1985	Percentage	1985	Percentage
	Amount	change	Average	change
	(millions)	from 1984	(dollars)	from 1984
	(1)	(2)	(3)	(4)

	95,684	18.9	7,257	4.2

^{*}Individual Returns Analysis Section. Prepared under the direction of Susan Hostetter, Chief.

STATUTORY ADJUSTMENTS

Total statutory adjustments to AGI increased more slowly than AGI for the first time since 1979 [4]. Growth in adjustments in the 1980-1984 period was fueled primarily by tax law changes which liberalized the rules for deducting payments to individual retirement arrangements (IRA's) and created the two-earner married couple deduction.

While these two largest components of statutory adjustments continued to increase for 1985, there was a substantial decrease in the adjustment for employee business expense. Both the aggregate amount deducted and the average amount reported per return declined (see Figure B).

ITEMIZED DEDUCTIONS

Total itemized deductions once again increased at a more rapid rate than AGI, a trend that began with 1979. For Tax Year 1985, total itemized deductions increased by 11.7 percent to over \$401 billion, with all components showing similar rates of increase except the deduction for medical and dental expense which increased but at a slower rate than AGI (see Figure C).

Medical and dental expense increased more slowly than any other itemized deduction. This is in direct contrast to 1984, when tax law changes made it the fastest growing deduction.

The deduction reflecting interest paid increased by more than 10 percent, while the average amount deducted per return increased by some 6 percent. This increase occurred despite the declining interest rates, previously mentioned. One possible factor was the increase in borrowing, caused, in part, by the declining interest rates. Total outstanding consumer installment credit increased by 18.0 percent from the beginning of 1984 to the end of 1985 [5].

Credit card interest deducted increased some 23 percent, reflecting the fact that credit card interest rates were essentially unchanged for 1984 [6]. Interest deducted on home mortgages also increased, by more than 10 percent.

INCOME TAX AND TAXABLE INCOME

Total income tax (the sum of income tax after credits and the additional tax for tax preferences, the so-called minimum tax) increased by 8.9 percent from its 1984 level (see Figure D).

Figure B.-- Selected 1985 Statutory Adjustments and Percentage Change from 1984

Selected statutory adjustments	1985 Amount	Percentage change	1985 Average	Percentage change
	(millions)	from 1984	(dollars)	from 1984
	(1)	(2)	(3)	(4)

	48,031	14.0	1,326	9.0				

Figure D.--Adjusted Gross Income, Taxable Income, and Total Income Tax, Tax Years 1981-1985

[Billions of dollars]

Tax Year	Adjusted gross income	Taxable income	Total income tax
	(1)	(2)	(3)
1981 1982 1983 1984	\$1,773 1,852 1,943 2,140 2,322	\$1,411 1,473 1,545 1,701 1,833	\$284 278 274 302 329

Total income tax for 1982 and 1983 decreased because of the tax rate cuts phased in by the Economic Recovery Tax Act of 1981. Even though the last of these tax cuts became effective for Tax Year 1984, total income tax for that year rose, reflecting the 10 percent increases in both AGI and taxable income. For 1985, the increase in total income tax was moderated by the impact of indexing on tax rate brackets, personal exemptions, and the "zero bracket amount" (ZBA).

The number of returns which reported any amount of "total income tax" rose by 1.8 percent from 81.6 million for Tax Year 1984 to 83.1 million for Tax Year 1985. However, the proportion of returns with total income tax, which had been increasing slowly since 1977, decreased 0.4 percent (see Figure E). This small decline may be the result of indexing. Whereas 62.1 percent of the 10.3 million returns with AGI \$3,000 under \$5,000 were taxable for 1984, only 56.4 percent of the 10.0

Figure E.--Returns Reporting Total Income Tax, Tax Years 1977-1985

[Number of returns in millions]

Tax Year	Total returns	Returns reporting total income tax	Percentage of total
	(1)	(2)	(3)
1977 1978 1979 1980 1981 1982 1983 1984	86.6 89.8 92.7 93.9 95.4 95.3 96.3 99.4 101.7	64.4 68.7 71.7 73.9 76.7 77.0 78.0 81.6 83.1	74.4% 76.5 77.3 78.7 80.4 80.8 81.0 82.1 81.7

million such returns were taxable for 1985. At this AGI level, the indexing of the exemption amount and of the ZBA made some otherwise taxable returns nontaxable.

TAX CREDITS

Both the total amount of tax credits claimed and the number of returns with credits increased from Tax Year 1984 to 1985. Returns with income tax before credits increased by 2.0 percent from 1984, and approximately one-fourth of these returns claimed tax credits. The two largest credits—the general business credit and the child care credit—accounted for 73 percent of the total amount of credits claimed (see Figure F).

Figure F.--Selected Tax Credits, Tax Years 1984 and 1985

[Millions of dollars]

Tax Year	Total tax credits	General <u>l</u> / business credit	Cnild care credit
	(1)	(2)	(3)
1984 1985	\$9,263 10,433	\$4,410 4,490	\$2,649 3,131

 $\underline{1}$ /Consists of investment credit, jobs credit and alcohol fuels credit.

The amount of child care credit alone rose from \$2.6 billion to \$3.1 billion, an increase of 18.2 percent. As Figure G shows, since its introduction in 1976, the child care credit increased significantly each year, both in amount and in number of returns claiming this credit.

Figure G.--Child Care Credit, Tax Years 1976-

<u> 1985 </u>			
Tax Year	Number of returns (thousands)	Amount (millions)	Percentage change from prior year
	(1)	(2)	(3)

N/A - Not Applicable

The Energy Tax Act of 1978 introduced the residential energy credit covering years 1976 through 1985. For Tax Year 1985, the number of returns claiming this credit increased 13.2 percent and the total amount claimed increased 26.2 percent over 1984 (see Figure H). These increases may have resulted from taxpayers taking advantage of this credit before it expired at the end of 1985.

Figure H.--Residential Energy Credit, Tax Years 1980-1985

Tax Year	Number of returns (thousands)	Amount (millions)
1980	4,670	\$562
1981	3,870	601
1982	3,136	583
1983	2,530	549
1984	2,656	645
1985	3,005	814

RETURN FILINGS

More than 101.7 million individual income tax returns were filed for Tax Year 1985, an increase of 2.3 percent over the number filed for 1984. One factor contributing to the increase may have been the dramatic change in the mix of returns filed for recent years. Since 1975, the percentage of returns representing joint filers fell from 53.7 to 47.2, while the percentage of returns representing single and head-of-household filers rose from 43.8 to 51.8 (see Figure I). In general, there is a two-for-one increase in returns filed if single returns are substituted for joint returns.

SUMMARY

Income increases in 1985 were fueled by growth in salaries, pensions, dividends, business income, and capital gains, while interest receipts were reduced by falling interest rates. Indexing provisions and rising deductions caused taxable income to rise at a slower rate than AGI. All types of itemized deductions increased as did most tax credits, particularly where taxpayers took advantage of the final year for energy-saving investments.

DEFINITIONS AND TAX LAW CHANGES

In general, the definitions of the terms used are the same as those shown in the complete report, <u>Statistics of Income--1984</u>, <u>Individual Income Tax Returns</u>.

The following is a partial list of 1985 tax law and administrative changes that are reflected in the preliminary data in this

article. These changes for Tax Year 1985 may have been further revised by the Tax Reform Act of 1986. The changes made by the 1986 Act are not discussed in this article, because they were not applicable to 1985. Changes are listed in the same order as the topics are presented in this article.

• For Tax Year 1985, all taxable alimony and separate maintenance payments received by an individual were treated as compensation for purposes of the IRA deduction limitation. Therefore, a divorced or separated

individual could contribute and deduct the least of the following amounts:

- (1) \$2,000,
- (2) all compensation that had to be included in income for the year, or
- (3) the amount of cash actually contributed to the IRA for the year.
- For 1985, taxpayers who did not itemize deductions could deduct one-half of their qualified charitable contributions without any dollar limitation other than the overall AGI limitation for contributions. For 1984, this deduction had been limited to 25 percent of the first \$300 of charitable contributions.
- For 1985, the deduction for use of a car in performing services for a charitable organization was increased from 9 cents to 12 cents a mile.
- The 1985 tax rate schedules were indexed to the Department of Labor's Consumer Price Index to limit the effect of inflation on taxes. Also as a result of indexing, the amount allowed as a deduction for each exemption was increased to \$1,040 and the zero bracket amounts for all filing statuses were increased, and each tax bracket was widened.

DATA SOURCES AND LIMITATIONS

These preliminary statistics are based on a sample of individual income tax returns (Forms 1040, 1040A, and 1040EZ) filed for Tax Year Returns in the sample were stratified based on the presence or absence of Schedule C, Profit (or Loss) from Business or Profession; Schedule F, Farm Income and Expenses; the larger of total income or total loss, and the size of business plus farm receipts. For Tax Year 1985, returns were selected at rates ranging from 0.02 percent to 100 percent. There were 105,034 returns in the 1985 preliminary sample estimating a total population of 101,737,544. The corresponding sample size and population for the preliminary 1984 data were 79,797 and 99,604,975, respectively. Sample size and population for the final 1984 data referenced in this article were 94,422 and 99,579,174, respectively.

Because the data presented in this article are estimates based on a sample of returns filed, they are subject to sampling error. To properly use the statistical data provided, the magnitude of the potential sampling error must be known. Coefficients of variation (CV's) are used to measure that magnitude.

The following table presents approximate coefficients of variation (CV's) for frequency estimates. The approximate CV's shown here are intended only as a general indication of the reliability of the data. For a number other than those shown, the corresponding CV's can be estimated by interpolation. The reliability of estimates based on samples, and the use of coefficients of variation for evaluating the precision of estimates based on samples, are discussed in the Appendix.

Number of returns	Approximate Coefficient of Variation
28,705,000	0.01
7,176,300	0.02
1,148,200	0.05
287,100	0.10
71,800	0.20
31,900	0.30
23,400	0.35
11,500	0.50

These preliminary estimates are subject to several types of nonsampling reporting error. While the estimates are intended to represent the full year's taxpayer reporting, they are actually based on returns processed between January 1986 and late September 1986. In general, those returns processed after late September (which are sampled for use in the revised estimates for the year) tend to have slightly different characteristics from those filed earlier. The characteristics of these later returns include higher income, a larger proportion of investment income (such as from capital gains), a higher average tax liability, and a larger proportion of certain other items such as the alternative minimum tax.

NOTES AND REFERENCES

- [1] For example, the average rate for 6-month commercial paper fell from 10.16 percent in 1984 to 8.01 percent in 1985. Interest rate data are from the Economic Report of the President, February 1986, pp. 332-333.
- [2] For further information on average interest reported and interest rates, see Grayson, Paul E., "Interest Income and Deductions on Individual Income Tax Returns, 1968-1984," Statistics of Income Bulletin, Volume 6, Number 2, p. 49.
- [3] Clark, Bobby and Paris, David, "Sales of Capital Assets, 1981 and 1982," Statistics of Income Bulletin, Volume 5, Number 3, p. 65.

- [4] Statutory adjustments are deductions from gross income to arrive at adjusted gross income. The deductions consist of moving expense deduction, employee business expense deduction, payments to an individual retirement arrangement (IRA), payments to a self-employed retirement (Keogh) plan, forfeited interest penalty, alimony paid, deduction for a working married couple, foreign housing deduction, forestation/reforestation amortiza-
- tion deduction and the repayment of supplemental unemployment benefits.
- [5] Board of Governors of the Federal Reserve System, Federal Reserve Bulletin, December 1986, Table A40.
- [6] The decline in credit card rates was from 18.77 to 18.69 percent, or by only 0.4 percent, between 1984 and 1985.
